Metrixware Systemobjects wins GES PETROGAZ's Information System implementation project in Senegal

March 21, 2023,

On March 15, Metrixware Systemobjects started the **implementation of an Information System for the management of maritime safety and security and the prevention of marine pollution** related to Oil&Gas activities, for GES PETROGAZ in Senegal.

For more than 30 years, **Metrixware Systemobjects** has been present in France and internationally with **middleware solutions and tools to address the issues of information system obsolescence,** modernization of business processes and applications, and software development productivity.

Once again (°) **chosen by the Senegalese government** through an international tender for such a strategic project and **financed by the World Bank**, Metrixware Systemobjects confirms its position as a leader in the digitalisation of business processes related to security, safety, compliance, ISO standards and risk management.

Metrixware's "low code" Isiman technology is featured in this project. Indeed, the Isiman suite allows us to offer directly operational normative components and its pricing is adapted to the West African market. Moreover, its openness will allow our Senegalese partner Kewël to carry out the specific developments required for such an application.

The Isiman technology provided by Metrixware is the most appropriate response to the rapid computerisation of companies and administrations in the sub-region.

The use of an IBM Power mid-range server in a Linux, Tomcat, Java and PostgreSQL context will meet the challenges related to security and safety.

(°) At the end of the 90's, Metrixware supported the Senegalese Customs Administration in the framework of a World Bank project for the modernisation of an IS based on IBM z/OS.

A PROPOS DE METRIXWARE

Metrixware Systemobjects is a French independent software vendor (ISV).

Since 1991, the company has been developing solutions for the modernization and urbanization of Information Systems to reduce obsolescence, improve performance, introduce innovation into the most critical business processes and applications, and provide tools adapted to development teams.

Metrixware Systemobjects aims to provide a fast and fluid bridge between historical processes and the latest trends and innovations, facilitating the integration of new uses and needs in the most critical businesses.

As a long-standing IBM Business Partner, the company is recognised worldwide by major players in banking, insurance, industry, IT and public administration.

Metrixware Systemobjects has a comprehensive range of solutions:

- **Mainframe Integrator Suite** for CONNECTIVITY between an old Information System and new needs and uses
- **Cobos** and **Delphi/400** for the PRODUCTIVITY of the necessary developments on ageing business processes and Information Systems
- **Rapid** for the URBANISATION of an Information System hit by obsolescence or technical debts
- **Isiman** for the GOVERNANCE of the Information System: Performance, Compliance, Quality, Risk Management

ABOUT KEWËL

Since 2018, Kewël has been supporting administrations and companies of all sizes in their needs for digital management tools in Senegal and internationally (Japan, France, Germany).

Growth and profitability depend on detailed, secure and optimal management and analysis of business data, thanks to applications using innovative and sustainable technologies.

With its experienced "Fullstack" engineers, Kewël assists you in all your projects to set up or improve your information system.

Kewël is your local reference with its tailor-made solutions!
